

Defense Solution fonts

The following Windows TrueType fonts are required for the Map Production System for the creation of Defense Solution products such as TLM50, TLM100, or JOG. They are available for purchase in sets, as outlined in the table below.

Font set name	Included fonts
Zurich package	<ul style="list-style-type: none">• Zurich BT• Zurich Italic BT• Zurich Bold BT• Zurich Bold Italic BT
Zurich Condensed package	<ul style="list-style-type: none">• Zurich Condensed BT• Zurich Condensed Italic BT• Zurich Bold Condensed BT• Zurich Bold Condensed Italic BT
Zurich Light package	<ul style="list-style-type: none">• Zurich Light BT• Zurich Light Italic BT
Zurich Light Condensed package	<ul style="list-style-type: none">• Zurich Light Condensed BT• Zurich Light Condensed Italic BT

Barcode fonts

If a barcode is required on a map sheet or chart, the appropriate bar code font must be installed on the local system.

Note

- The font must match the specifications required by the customer. There are many types of bar code specifications and fonts available. For example, in the case of NGA, many products require a bar code font that meets the Code 39 specification.
- The appropriate font should be installed prior to opening an MXD that references the font. If it is not, the barcode font will default to Arial.
- The font should be installed prior to generating map sheets or charts that require a barcode.
- If the map document will be exported, it is recommended that the font be embeddable.
- Arial is the default font for the barcode element used by MPS for various map series included in the Defense Solution. It will be necessary to edit the MPS barcode note element's title so it references the proper barcode font.
