Hello,

Thanks for your feedback on configuring feature search. Currently, ArcGIS Online only supports one search attribute per layer. I will clarify this in the documentation.

You may wish to request the ability to specify multiple search attributes per layer. You can do so through the [ArcGIS Ideas](#) web site.

Jennifer

Submitted values are:

Regarding Web page: <http://doc.arcgis.com/en/arcgis-online/create-maps/configure-feature-search.htm>

Feedback: The directions were good and it showed you how to enable a feature search for a single attribute but it did not show you how to enable multiple feature searches in the case that you want different attributes searchable?
