What's New in ArcGIS Workflow Manager 10.3

September 2014

This document contains a quick overview of the new features introduced at current release of ArcGIS Workflow Manager. For more details on the features, consult the user guide that is installed with the application.

Workflow Manager Desktop

- Configure the Extended Properties step to only open specific fields

- Use an ArcGIS Portal or Organizational user store to configure Workflow Manager users.

- Use new Create Jobs tool to create one or more jobs of a job type and assign the jobs to users with a defined AOI.

- Create dynamic reports based on input values like dates at run time.

- Execute and Launch GP steps support using the result of a tool as a return code to guide the workflow path.

Workflow Manager Server

- REST API extended to include Opening Closed Jobs and Recreate Workflows

Workflow Manager Javascript Viewer

- Filter job list based on Bar chart or pie chart

- View Extended Properties

- Manage Attachments

- Support job ID and query ID in the web app URL to open a specific job

Please refer to the ArcGIS Workflow Manager documentation for more details, including other improvements.
