

# Upgrading Portal for ArcGIS to 10.4.1

- In-place upgrade,
  - 10.2, 10.2.1, 10.2.2, 10.3, 10.3.1, 10.4 → 10.4.1

- 5 key points for upgrading Portal for ArcGIS
  1. **Read documentation** and consider back up Portal directories
  2. You will be prompted to create an Initial Administrator Account; use the same account
  3. Re-index your Portal items
  4. Clear your web browser cache after performing upgrade
  5. For Server sites federated with Portal, do NOT un-federate site
    - Perform upgrade on Portal and Server sites individually
    - Order does NOT matter

# Upgrading Portal for ArcGIS to 10.4.1

- **For ArcGIS Web Adaptor,**
  - Must uninstall previous version, then reinstall 10.4.1 version
  - Use the same name
  
- **For ArcGIS Data Store,**
  - ArcGIS Server must be upgraded first, before the Data Store
  - Reconfigure ArcGIS Data Store with ArcGIS Server
  - If you have standby deployment enable, need to upgrade primary machine first, then secondary machine
