# Best Management Practices in GIS

## The multigenerational workforce

● Builders   ● Boomers   ● Gen X   ● Millennials   ● Next Gen

### 1 Anticipate

Look ahead to make sure your business is ready for generational changes.

### 2 Innovate

Don't wait for a crisis to address evolving needs. Experiment with new strategies and ways of working.

### 3 Adapt

Keep iterating. Your workforce won't stop changing. If you get stuck in the past, they'll move on.

Source: U.S. Census Bureau, 2015

# Best Management Practices in GIS

## TAM Principles

1. Policy Driven
2. Performance-Based
3. Evaluates Options
- 4. Data Driven**
5. Transparent

# Best Management Practices in GIS

# Best Management Practices in GIS

ITIL Concept

## Program

A group of related activities whose outcomes achieve a Vision, Mission or Goal. Programs are often continual, and change over time.

## Project

A specific set of activities, with a defined begin and end, whose outcomes contribute to the Objectives, CSF, KPI Metrics or Measures needed by a Program to be successful.

# Best Management Practices in GIS: **Process**

## Capability Maturity Models

### What is maturity?

Organizational maturity is a measure of an organization's readiness and capability expressed through its people, processes, data and technologies and the consistent measurement practices that are in place

# Best Management Practices in GIS: **Process**

## Capability Maturity Models

How do we determine maturity?

A **maturity model** is a **framework** that is used as a **benchmark** for **comparison** when looking at an organization's **processes**. It is specifically used when evaluating the **capability** to implement **data management strategies** and the **level** at which that organization could be at **risk** from said strategies.

# Best Management Practices in GIS: **Process**

## Capability Maturity Models

How do we determine maturity?

A **Capability Maturity Model (CMM)** is a **methodology** used to develop and refine an organization's process. The **model** describes a **five-level** evolutionary path of **increasingly organized** and **systematically** more mature processes.

# Best Management Practices in GIS: **Process**

## Capability Maturity Models

### Maturity Levels

#### Initial

- Processes are disorganized
- Individual efforts
- Not repeatable
- Not defined and documented
- Reactive

# Best Management Practices in GIS: **Process**

## Capability Maturity Models

### Maturity Levels

#### Repeatable

- Basic management techniques
- Successes can be replicated
- Established process

# Best Management Practices in GIS: **Process**

## Capability Maturity Models

### Maturity Levels

#### Defined

- Documented processes
- Generally consistent application

# Best Management Practices in GIS: **Process**

## Capability Maturity Models

### Maturity Levels

#### Managed

- Documented processes
- Performance measured

# Best Management Practices in GIS: **Process**

## Capability Maturity Models

### Maturity Levels

#### Optimized

- Documented processes
- Performance measured
- Continuous process improvement

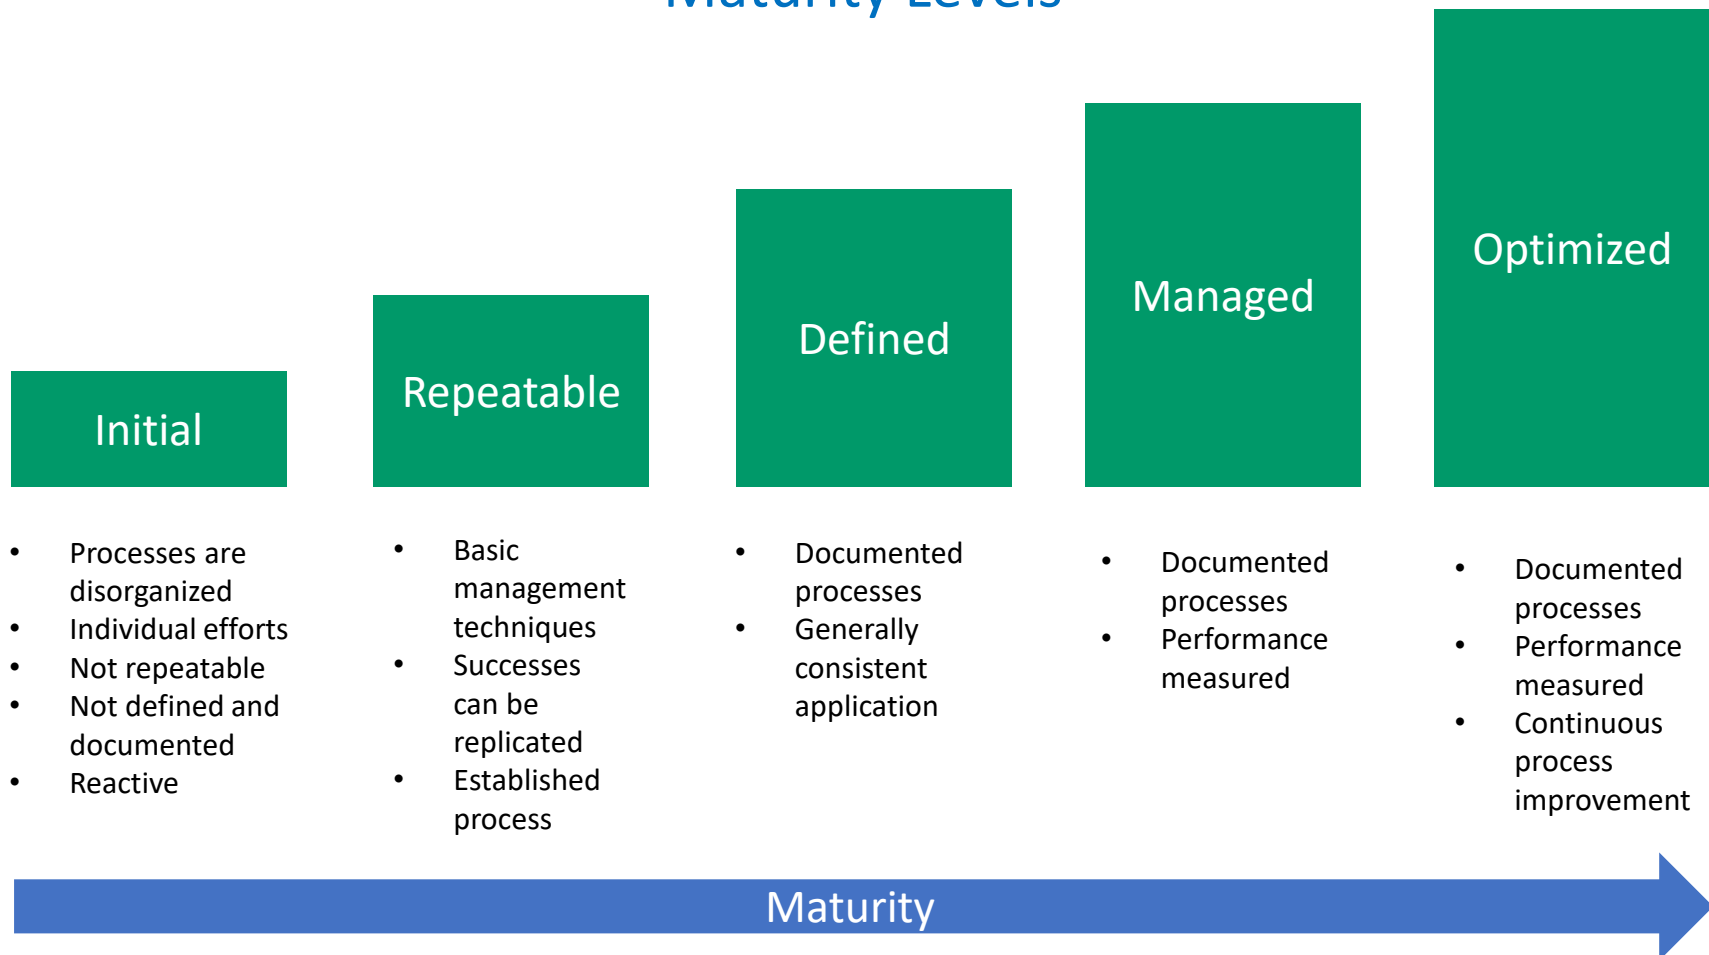

# Best Management Practices in GIS: **Process**

## Capability Maturity Models

### Maturity Levels

# Best Management Practices in GIS: **Process**

## Capability Maturity Models: Example – ODOT Data Governance

The cover of the report features the ODOT logo at the top left, followed by the text 'The Ohio Department of Transportation Office of Technical Services'. Below this is a green banner with the title 'Data Governance Study Findings and Recommendations Summary Report'. The central image is an aerial view of a complex highway interchange. At the bottom, it lists the preparer 'dts MAKERS OF VUEWorks.' and the date 'June 2017'. It also mentions cooperation with 'eVision Partners', 'TranSystems', and 'Engage Public Affairs'.

- Tailored Maturity Model
- Online Survey
- 2 rounds SME interviews
- DG Committee Results Review
- Recommendations

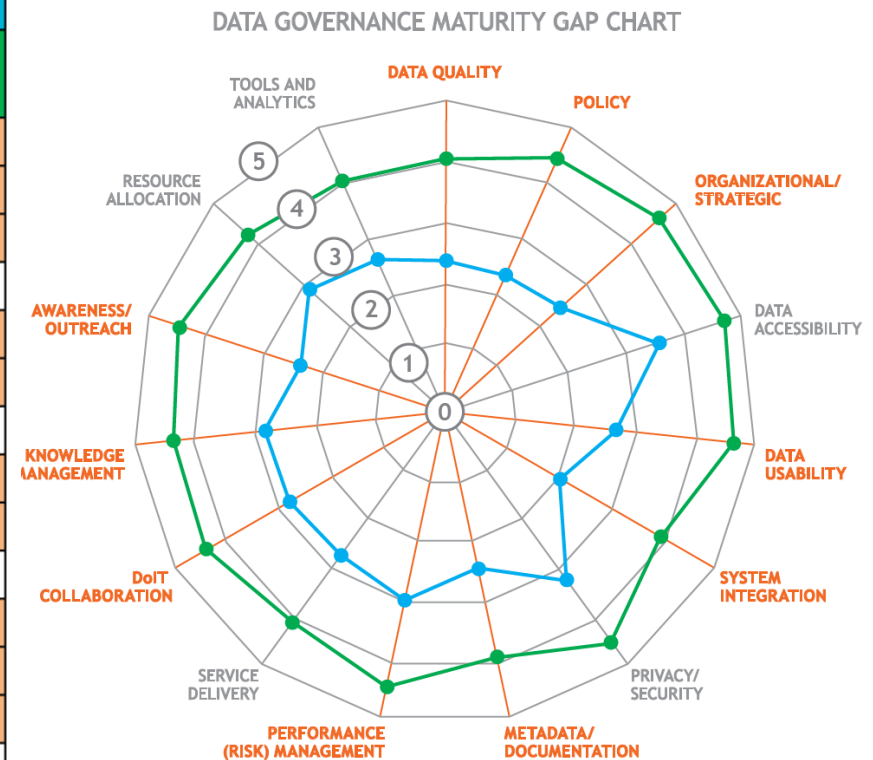

# Best Management Practices in GIS: Process

## Capability Maturity Models: Example – ODOT Data Governance

### Maturity Summary

Table 2 – Data Governance Area Summary Assessment for All Assets				
Data Governance Areas	Current Maturity Level	Target Maturity Level	Gap	Grade
Data Quality	2.43	4.04	1.61	C
Policy	2.40	4.47	2.07	D
Organizational/Strategic	2.51	4.64	2.13	D
Data Accessibility	3.60	4.73	1.13	A
Data Usability	2.78	4.67	1.89	D
System Integration	2.13	4.03	1.90	D
Privacy/Security	3.33	4.57	1.23	B
Metadata/Documentation	2.56	4.00	1.44	C
Performance (Risk) Mgmt.	3.07	4.51	1.44	C
Service Delivery	2.84	4.16	1.31	B
DoIT Collaboration	2.88	4.43	1.55	C
Knowledge Management	2.89	4.36	1.47	C
Awareness/Outreach	2.43	4.50	2.07	D
Resource Allocation	2.93	4.27	1.33	B
Tools and Analytics	2.68	4.00	1.32	B

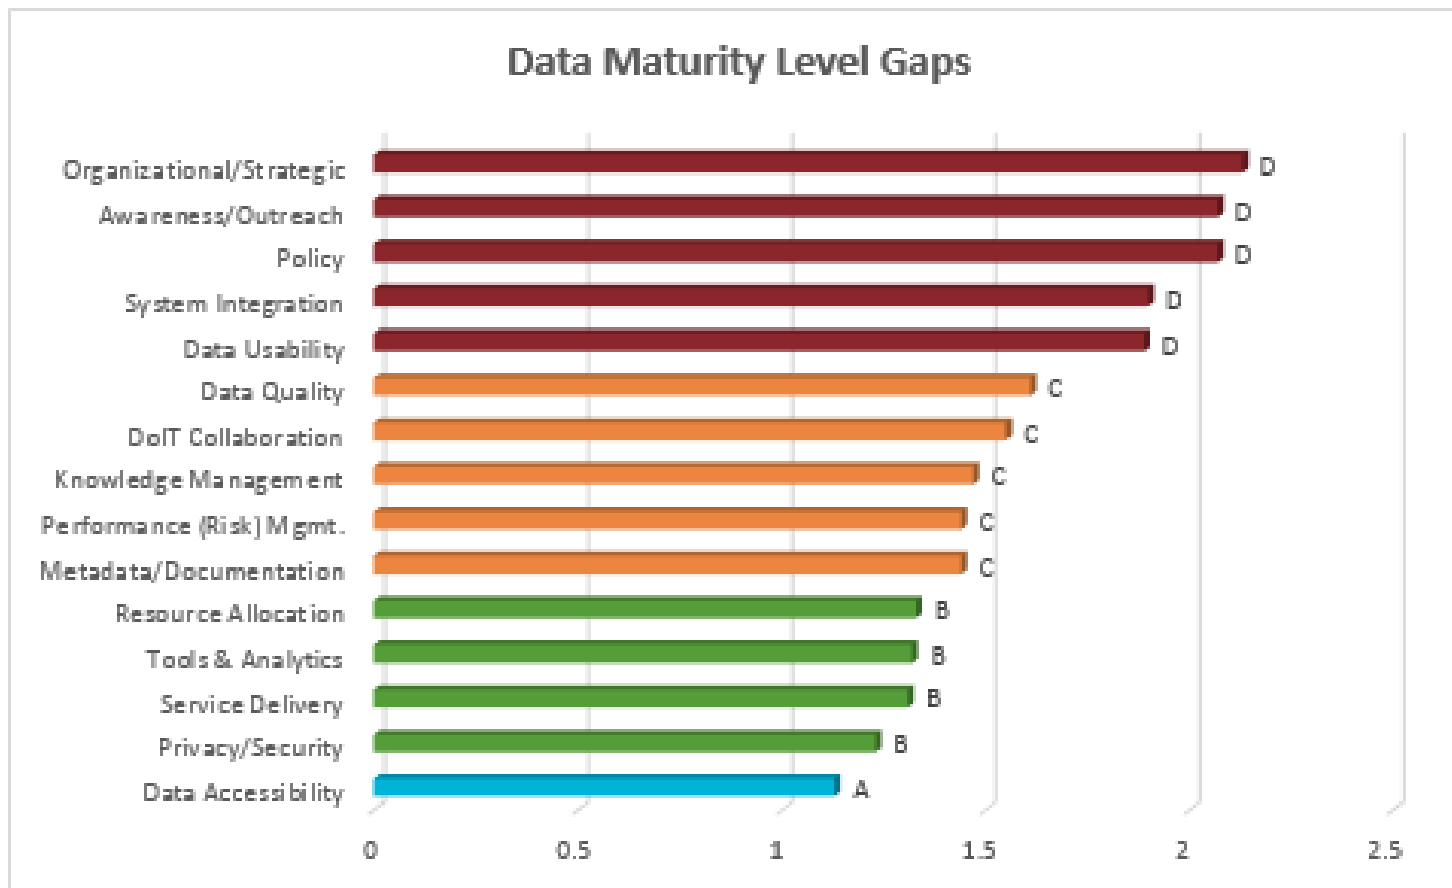

# Best Management Practices in GIS: Process

## Capability Maturity Models: Example – ODOT Data Governance

### Maturity Summary

# Best Management Practices in GIS: **Process**

## Capability Maturity Models: Example – ODOT Data Governance

### Recommendations

#### ODOT Data Governance Proposed 5-Year Timeline

PHASE 1	PHASE 2	PHASE 3
<b>PLAN AND DESIGN</b>	<b>BUILD</b>	<b>IMPLEMENT</b>
New Agency-Wide Approach to Data Governance	New Data Governance Framework	New Data Governance Plan
<ul style="list-style-type: none"><li>▶ Hire Chief Data Officer</li><li>▶ Establish data governance framework</li><li>▶ Create data governance oversight committee</li><li>▶ Develop executive level-approved data governance policy</li></ul>	<ul style="list-style-type: none"><li>▶ Review DoIT's current organizational structure</li><li>▶ Review skillsets needed to support the data governance framework</li><li>▶ Ensure IT strategic plan supports business needs</li><li>▶ Explore business intelligence capabilities</li></ul>	<ul style="list-style-type: none"><li>▶ Develop and integrate data warehouse/data lake</li><li>▶ Standardize data and migrate to new system</li><li>▶ Incorporate locational component in enterprise data</li></ul>

# Best Management Practices in GIS: **Process**

## Capability Maturity Models: Example – SLIMGIM-T

### Tailored DOT GIS CMM

- Developed through FHWA Peer Exchange collaboration
- Goal to enable organizational maturity comparison

### Maturity Areas

- Organizational Structure & Leadership
- Corporate Culture
- Organizational Capability
- Enterprise GIS Sustainability

# Best Management Practices in GIS: **Process**

## Strategic Planning: **Business Plan Importance**

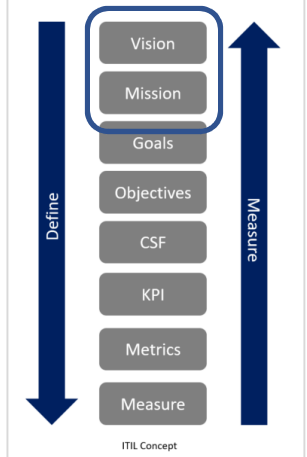

- Strategic planning determines **where** the GIS program is going, **how** you are going to get there, and **how you will know** if you got there.

# Best Management Practices in GIS: Process

## Strategic Planning: Business Plan

Office of Technical Services  
**Transportation Information Management Section**  
Business Plan 2019

Office of Technical Services • Transportation Information Management Section  
Business Plan 2019

**Executive Summary**

**PRIMARY OBJECTIVES**

**Roadway Information**  
We are responsible for roadway information distribute tax revenue analysis across ODOT

As technology and Vehicles, Intelligent roadway Information

**Geographic Information**  
We are responsible for accessing information (applications) and field iPad applications for

We ensure this technology upgrade to keep ODC Information and Services

**VISION MISSION**  
Fulfill assigned regulatory Support Ohio's Strategic Implement Transportation Integrity, Transparency

**CORE VALUES**

**OBSTACLES** Competing priorities.  
**SHORT-TERM** Enable cross-project  
**LONG-TERM** Implement continuous  
**SUCCESS** Adopt process-oriented

**PEOPLE** Empower, enable & c  
**PROCESSES** ITIL, CMM, Agile  
**TECHNOLOGY** Simplify, Integrate, C

Office of Technical Services • Transportation Information Management Section  
Business Plan 2019

**Guiding Principles**

**ITIL + Capability Maturity**

**Information Technology Service Management (ITIL)**  
ITIL is a framework that enables strategic alignment services with customer needs, focusing on delivering value while creating efficiency. This is achieved by defining processes to enable consistency, leading the ability to measure their performance.

The TIM Section leads several ODOT mission critical systems and processes, and ITIL provides a framework for organizing these activities to ensure our teams adapt to changing needs.

While we have unknowingly implemented ITIL practices over the last several years, our Section formally embraced the methodology in 2018. members are now ITIL Foundations Certified and striving to integrate these concepts into our every workflows.

DOT also utilizes the ITIL framework, which enables strong collaboration opportunities across our area.

**Capability Maturity**  
Capability Maturity is a simple method of assessing based on common criteria. Assessing the maturity opportunities exist.

It also helps manage scope of our work; often our team members want to jump to the Optimized phase due to their desire to be the best, but often this is not feasible until other factors have matured as well.

These concepts help make our progress manageable and realistic.

**Initial**

- Processes are disjointed
- Individual efforts
- Not repeatable
- Not defined and documented
- Reactive

Office of Technical Services • Transportation Information Management Section  
Business Plan 2019

**Strategic Trends**

Item	Status	Trend
People	Individuals & teams continue to grow in aptitude, skill and collaboration. This growth enables the TIM Section more productivity & ownership of solutions	↑
Processes	Workflows & architectures are being documented and integrated to daily operations. This enables better understanding of value and performance	↑
Technology Platform	Two of four ESRI based systems (RIMS & Collector) are experiencing performance issues. ESRI is also seeking to increase our licensing costs. Secured agreement to maintain current licensing in 2019 & revisit once issues are resolved.	↔

**Enterprise Program Support**

In addition to the core work plan items specified in this business plan, the TIM leadership for the following initiatives:

Program	Goal
Transportation Asset Management	Provide oversight & guidance for District Transportation Coordinators (DTAMC) Create & implement DTAMC annual action plan Develop process for monitoring and reporting TAM pr
Data Governance	Project Kick-Off for Data Governance Phase 1 Begin Data Governance Policy & Framework develop

Office of Technical Services • Transportation Information Management Section  
Business Plan 2019

**Roadway Information Program Descriptions**

The Roadway Information is the official record keeping of the road network information for the State of Ohio. This portfolio includes several programs, each driven by specific State/Federal regulatory statute, or to meet a business purpose related to ODOT's overall maintenance of Ohio's transportation system. Several projects are underway to advance some component of the business processes or systems related to ODOT's Roadway Information.

**Program: Highway Performance Monitoring System (HPMS)**  
HPMS is mandated by Congress (23 U.S.C. 502(h)) for the purposes of reporting the conditions and performance of the nation's transportation system. State DOTs are required to complete an annual submission related to public roads eligible for Federal-aid funding. The annual submission is utilized to apportion these funds. HPMS submissions are due by April 15<sup>th</sup> and June 15<sup>th</sup> annually, and reflect the road network conditions as of December 31<sup>st</sup> of the previous year.

**Program: Annual Local Road Mileage Certification**  
The annual local road mileage certification program is mandated by Ohio Revised Code 4501.04, requiring County and Township agencies to certify public road mileage with the state annually. Certification requires signature from all three County Commissioners and the County Engineer, or the three township trustees. The certified mileage is used to distribute County and Township Road funds. Local certification forms are due to ODOT by April 1<sup>st</sup> and reflect the road network conditions as of December 31 of the previous year.

**Program: Certified Road Mileage, All Roads Network of Linear Referenced Data**  
The Certified Public Road Mileage is an FHWA requirement (23 CFR 460) which required state DOTs to annually submit public road mileage certification to FHWA by June 1<sup>st</sup>. This information is utilized for the apportionment of Highway Safety Funds. The All Roads Network of Linear Referenced Data (ARNOLD) program is implemented through MAP-21, requiring a geospatial digitized linear referencing network of all roads. This submission can be facilitated to FHWA as part of the HPMS submittal or separately with the certified public mileage submission.

**Program: Functional Classification**  
Functional Classification is a designation system prescribed by FHWA which assigns roadways a category that identifies the primary purpose of a given route. This designation includes implications for design and operational standards, safety standards, Federal-Aid funding, and other factors. Functional Class is updated in conjunction with the decennial census. Functional classification is a significant designation utilized by transportation planners during project planning processes.

**Program: Location Based Response System (LBRS)**  
The Location Based Response System (LBRS) is an Ohio based initiative, which establishes a partnership between ODOT, the Ohio Geographically Referenced Information Program (OGRIP), and local government agencies to create and maintain a statewide street centerline and address file. This program enables communication across jurisdictions for NexGen911 purposes and helps ODOT meet ARNOLD requirements to FHWA.

# Best Management Practices in GIS: **Process**

## Strategic Planning: **Business Plan**

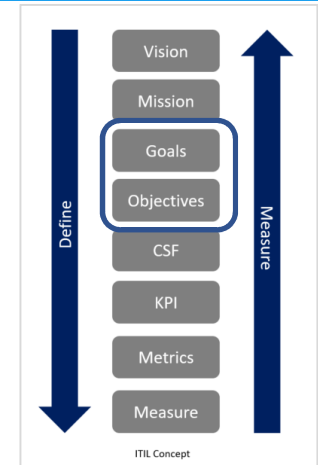

# Best Management Practices in GIS: Process

## Strategic Planning: Business Plan

2019 Work Plan	
Project/Activity	Goal
RIMS	Complete RIMS 2018 Season by 2/15/19 (edits, certified mileage, etc.)
	RIMS Maintenance
	Begin RIMS 2019 Season by (open system by May)
	BTRS 2018 Implementation
	BTRS Replacement
	Complete Validation Processes (shifting validations from BTRS to front end) – Priority 3
	Develop & Implement Publication / Reports – Priority 3
	RIMS Stability Issues – Priority 1
	Intersection Preserve Identifiers – Priority 3
	Intersection Phase II
RIMS Process Improvement (implementing ITIL, updating RI Manual, establishing CSF/KPI for RIMS, Incident Management implementation)	
HPMS	April Submission
	June Submission
	NBI-HPMS Data Sync
Falcon	Implement document imaging software & processes
LBRS Priority 2	Complete Preble, Medina, Auglaize, Geauga, Cuyahoga, Belmont, Delaware, Harrison, Union, Logan, Henry, Ashtabula, Athens, Stark, Carroll (15 counties)
PWEB	Implement Phase 1
	Implement Phase 2
Administration	Section Oversight
	Software Licensing (ESRI ELA, other software)
	OSIP Imagery MOU Funds
	ITIL Process Implementation

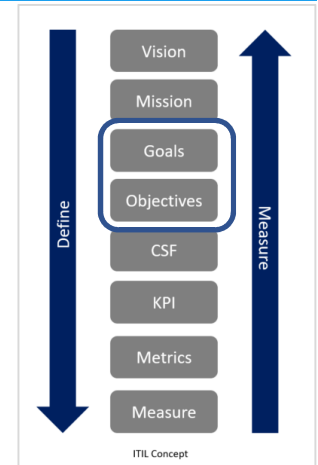

# Best Management Practices in GIS: **Process**

## Strategic Planning: **Business Plan: Strategic Analysis**

- Review the program and the environment
- SWOT analysis
  - Strengths & weaknesses (internal)
  - Opportunities & threats (external)

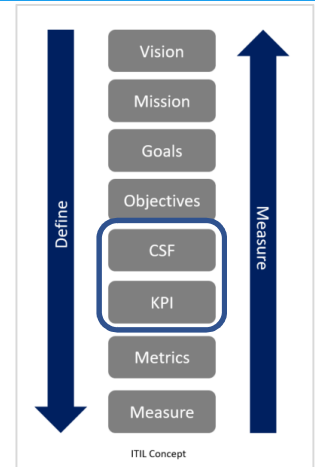

### 2018 SWOT

SWOT ANALYSIS	
INTERNAL FACTORS	
STRENGTHS	WEAKNESSES
<ul style="list-style-type: none"> <li>• Exceptional staff</li> <li>• Ample funding</li> <li>• Advanced information systems</li> <li>• Enterprise support</li> </ul>	<ul style="list-style-type: none"> <li>• Strategic project/program activity alignment</li> <li>• Ownership/integration of core technology for core business processes</li> </ul>
EXTERNAL FACTORS	
OPPORTUNITIES	THREATS
<ul style="list-style-type: none"> <li>• Influence vendor technology dev</li> <li>• Provide leadership for national/ state / local programs</li> </ul>	<ul style="list-style-type: none"> <li>• Unknown regulatory implementation timelines from FHWA</li> <li>• Changing DAS / IT / Procurement rules</li> </ul>
SWOT ANALYSIS	
<p>The TIMS area is successful in meeting current needs, and in a strong position to adapt to changing needs due to the high quality staff, funds and systems currently in place. These factors enable ODOT to guide industry solution development to benefit ODOT's objectives. Inconsistent or unknown timelines/rules create planning challenges, combined with existing internal coordination deficiencies result in disruptive reactionary response to issues as they arise.</p>

## Project Management

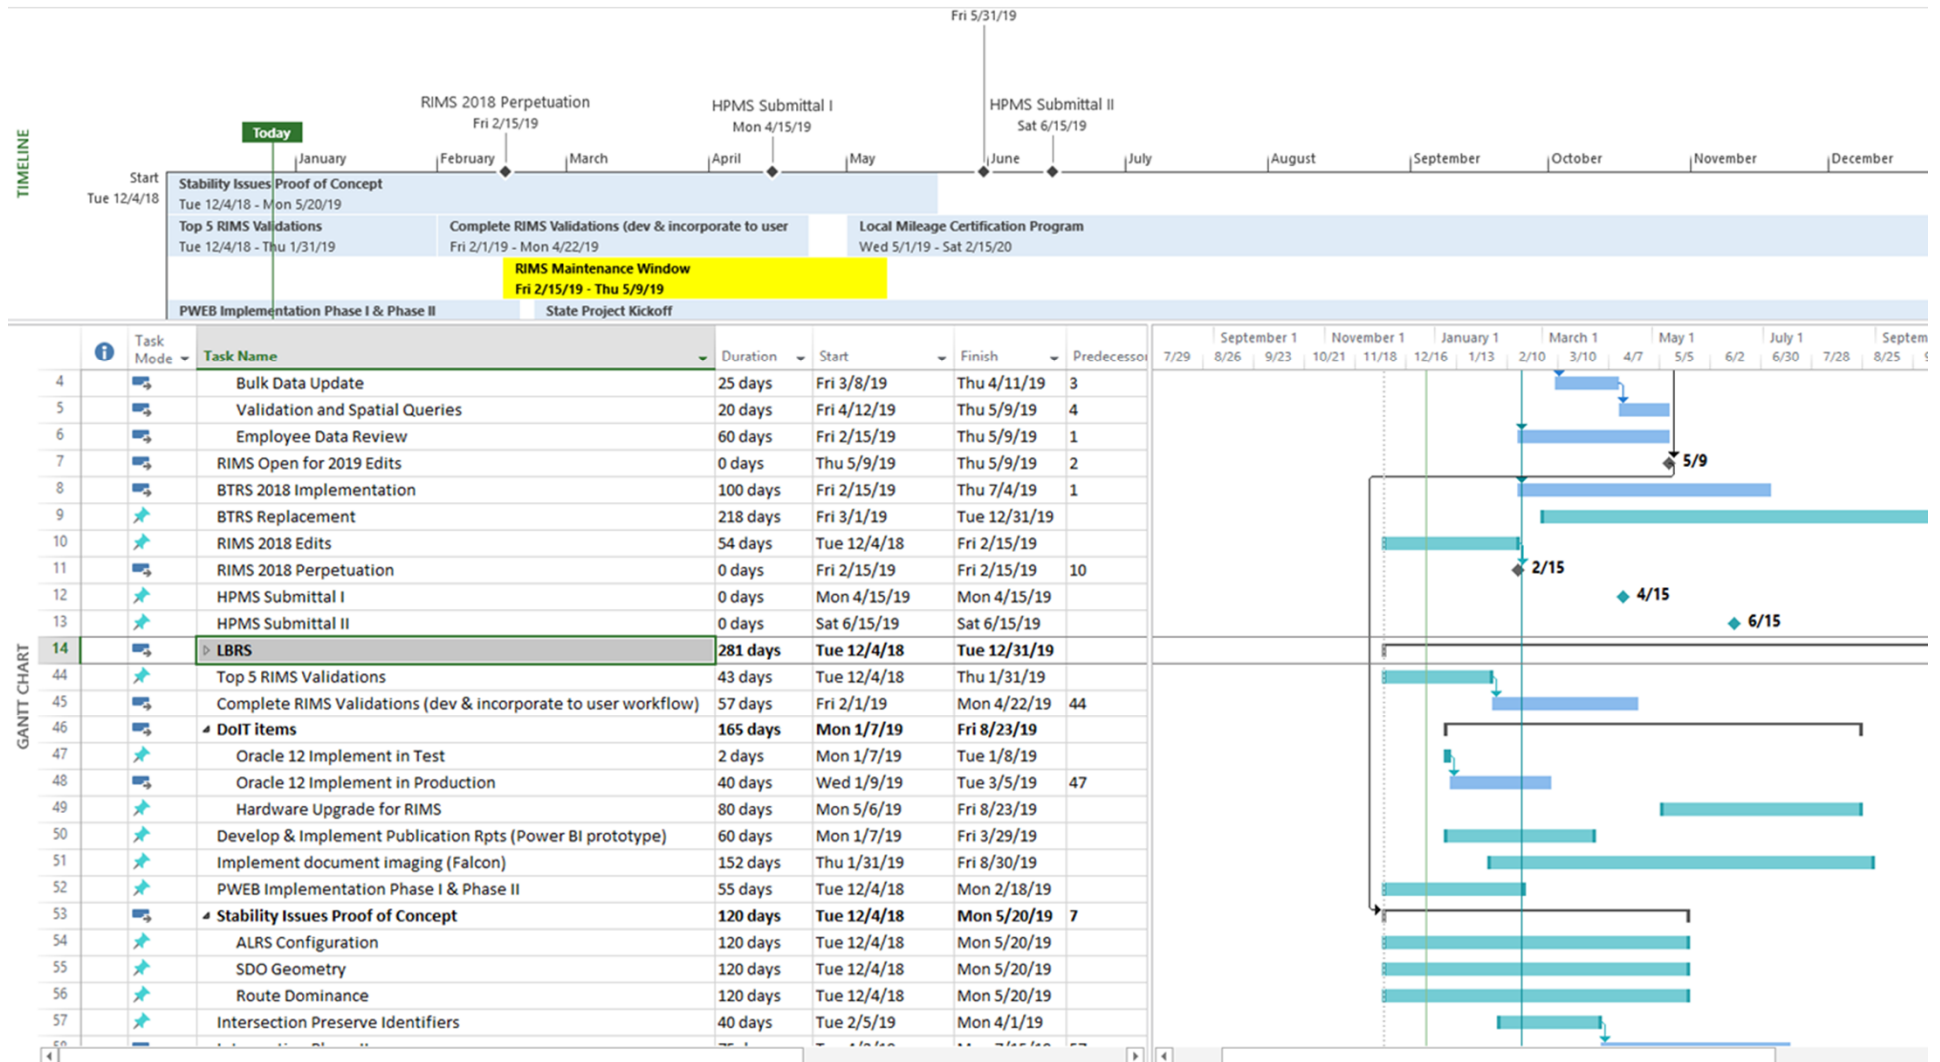

Best Practices in Project Management (PM) solutions helps organizations answer questions in five critical areas:

- Risk Control and Mitigation
- Resource Planning
- Financial Management
- Operational Improvement
- Compliance and Control

# Best Management Practices in GIS: Process

## Project Management

# Best Management Practices in GIS: Process

## Project Management

The screenshot displays the Asana project management interface for a sprint titled "Sprint 19 12/17 - 12/28". The interface is organized into a Kanban board with five columns: Backlog, Ready, In Progress, Testing, and Done. Each column contains task cards with titles, assignees, and progress indicators.

**Backlog:**

- RIMS - ArcGis Software - Identify CSF/KPI. (Assignee: LA)
- INTERSECTIONS - Intersections need to be perpetuated while keeping ids the same. (Assignee: TA, Mar 29, 2019)
- Document Validation Requirements (Assignee: LA)
- Mashup Table - Test RIMS\_ROAD\_INVENTORY\_QA and \_HIST (Assignee: LA)
- TIMS Perp - New Process (Assignee: LA)
- Revisit RIMS Portfolio - ITIL docs (Assignee: LA)

**Ready:**

- Mashup Table - incorporate LEAVE\_REENTER\_TYPE\_CD (Assignee: LA, 3 Blocked...)
- Test Validation - GNRL\_01 - Validate Full Extent Layers (Assignee: LA)
- Test Validations - GNRL\_02 - Duplicate or Overlapping Event Segments (Assignee: LA)
- Identify PCR Historical Data for TAMDST (Assignee: LA)
- Mashup Table - 6. Schedule and run "Calculate route concurrencies" ESRI tool for QA version and populate the RH.RIMS\_ROUTE\_CONCURRENCIES,... (Assignee: LA)
- HIM - Work with Aditva to test the (Assignee: LA)

**In Progress:**

- Testing Toolset prototype (Assignee: LA, 5)
- RIMS Maintenance - Add additional validations from mainframe into VA (Assignee: LA, 5)
- BTRS - fix the BTRS scripts in order to run the mainframe validations on a regular basis starting Jan-01-2019. (Assignee: LA, 5 RIMS te...)
- RIMS Maintenance - Apply Concrete to Surface Base Type Tables (Assignee: EP, 13)
- RIMS Stability New RIMS Environment- Step 2: Create all 4 base ALRS table in the new env and populate the data. (Assignee: LA)

**Testing:**

- Test Validation - ALRS\_02 Inconsistent County Splits (Assignee: Scott - ..., 3)
- Test validation - ALRS\_01 Inconsistent overlaps (Assignee: Scott - ..., 3)
- [Duplicate] Validations - 5. (ATTR 1) Invalid nlf\_id in ALRS and event layers (Assignee: AC, 1)
- PWEB - Correct PCR/Perp year data for PCR increase segments so that they are related 1 year apart the way PCR currently is. (Assignee: TA, 5)

**Done:**

- Test Validation - ATTR 01 Invalid nlf\_id in ALRS and event layers (Assignee: Scott - ..., 3)
- PWEB - Non-Func: Update PWeb deployment environment to use java 8 and Tomcat 8.5 (Assignee: TA, 5)
- PWEB - Install Java 8 and Tomcat 8 on Test and Dev Environments. (Assignee: TA, 3)

The interface includes a sidebar with navigation options like Home, My Tasks, and Portfolios, and a top navigation bar with tabs for Board, Timeline, Calendar, Conversations, Progress, and Files. A search bar and a "+ New" button are also visible.

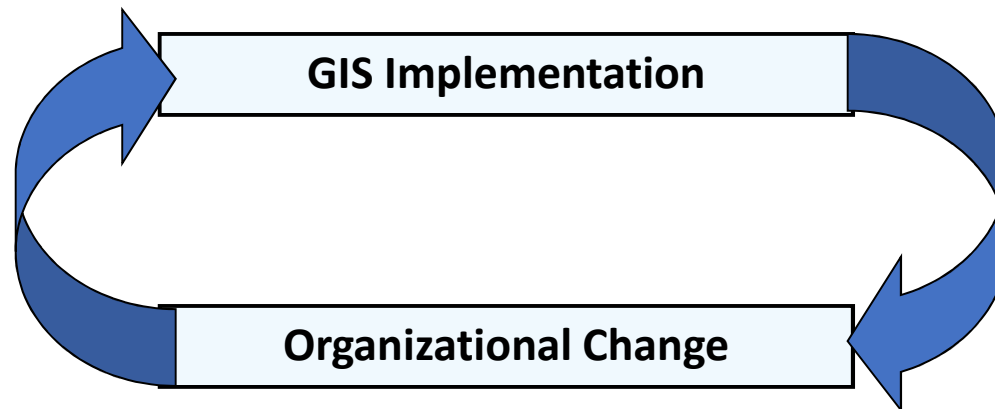

# Best Management Practices in GIS: **Process**

## Organizational Change Management

### Critical to GIS Success

- Achieve vision and plan
- Achieve benefits
- Improve the organization's operation
- Benefit employees

# Best Management Practices in GIS: **Process**

## Organizational Change Management

- Common Terms
  - Organizational change
  - Planned change
  - Change management
- Organizational Development
  - “A system-wide application of behavioral science knowledge to the planned development and reinforcement of organizational strategies, structures, and processes for improving an organization’s effectiveness.” – Cummings and Worley, 1997

# Best Management Practices in GIS: **Process**

## Organizational Change Management

### Components

#### ***Elements:***

- Management support
- Understanding and willingness
- Change agent
- A plan and method
- Participation
- Team
- Communication
- Education
- Closure

#### **Changes Must Occur in...**

- ◊ Structure
- ◊ Roles
- ◊ Strategic planning
- ◊ Policies and procedures

# Best Management Practices in GIS: **Process**

## Organizational Change Management

### Change Sources

#### Source of Change

- Internal  
(inside organization or project structure)
- External

#### Nature/Triggers of Change

- Cyclical/Predictable
- Self-induced or planned
- Unpredictable
- Forced/Mandated

# Best Management Practices in GIS: **Process**

## Organizational Change Management

### Phases of Change

# Best Management Practices in GIS: **Process**

## Organizational Change Management

### Managing Change

- Clarify expectations and roles for the change process
- Identify priorities for change
- Plan organizational development activities to address priorities

# Best Management Practices in GIS

**Industry Hot Topic: Data Governance: Data is THE Asset**

## Typical Data Management Challenges

Defining and distinguishing critical data assets from all other data

Big data architecture decisions

Data capture

Data storage

Analysis capabilities

Robust search capabilities

Maintaining data currency

Data visualization

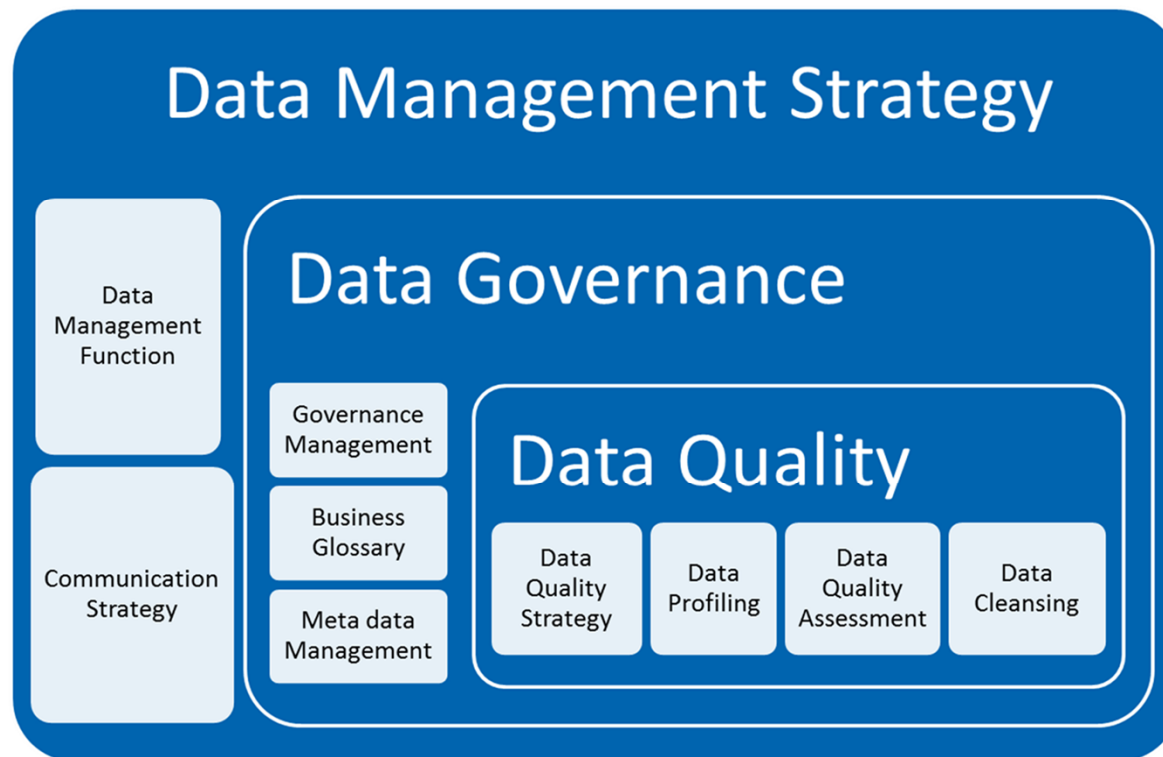

Data privacy

Data protection

# Best Management Practices in GIS

## Industry Hot Topic: Data Governance

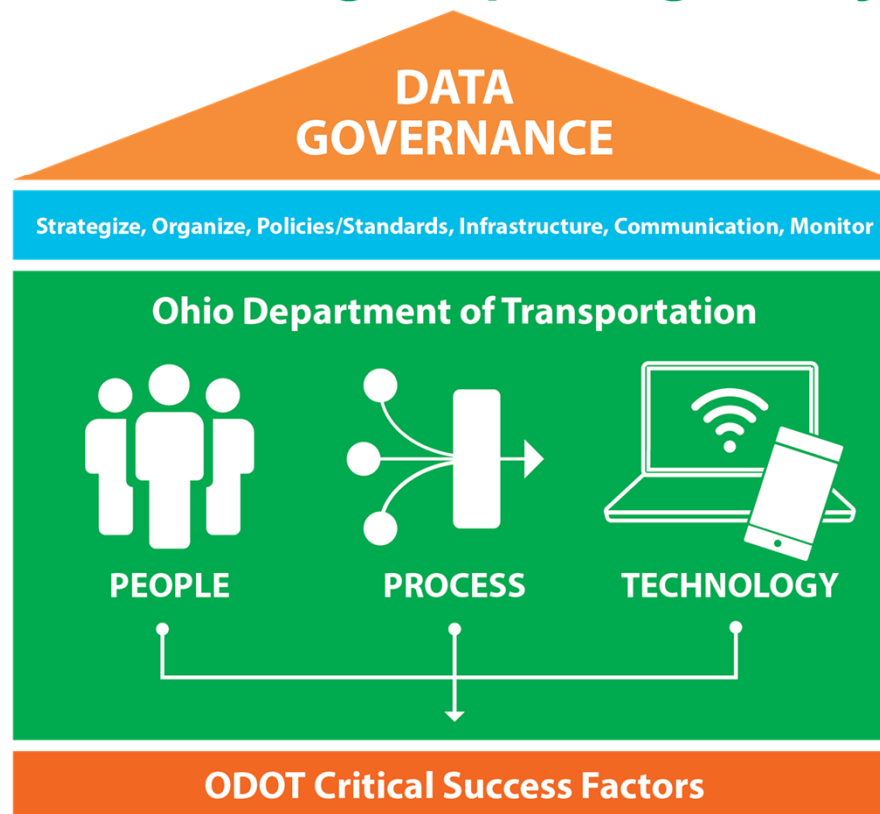

### Managing Relationship between Data Management, Governance and Quality

# Best Management Practices in GIS

## Industry Hot Topic: **Data Governance: ODOT Strategy**

### Culture Change Impacting Nearly All

# Best Management Practices in GIS

## Industry Hot Topic: **Data Governance: ODOT Definition**

### What is it?

- Governance of data within ODOT
- Core foundation for how ODOT implements data management policy, standards, and procedures
- Continuous collaborative process requiring participation throughout agency

### Why?

- ODOT's planning and decisions impact Ohio's economy (multi-billion dollars)
- Citizen safety
- Data is highly valuable enterprise asset needing oversight

# Best Management Practices in GIS

## Industry Hot Topic: **Data Governance: Mission and Vision**

### Mission

- Ensure ODOT creates and maintains reliable transportation data that is accurate, available, timely and usable for *People, Processes and Technology*.

### Vision

- Data Governance (DG) will steward the standardization, coordination, and integration of existing and future applications, data sources, and reporting at ODOT.

PEOPLE

PROCESS

TECHNOLOGY

# Best Management Practices in GIS

## Industry Hot Topic: **Data Governance: State of the Practice: Future**

### No DG process leading to:

- Inaccurate data
- Data redundancy
- Unavailable data
- Untimely data
- Absence of data standards
- Data integration difficulties

### Some aspects of DG are in place

- TAM Audit Group, GIS (TIMS) Standards, STP (Enterprise Architecture), DoIT Technical Requirements and BTRS

**ODOT needs coordinated, agency-wide  
DG process to improve effectiveness**
