

November Meeting

11/10/2021

AGENDA

1. Announcements
2. Esri Update
3. Event Data Quality Checks
4. Open Discussion

**** Please mute phones!! ****

ANNOUNCEMENTS

- GeoNet Updates
- Community Polling

Esri Updates

Nathan Easley

Event Data Quality Checks

Shaun Perfect and John Ehlen

Open Discussion

RHUG Community

Upcoming Meetings / Contacts

Wednesday December 8th, 1:30-3pm

Contact Info:

Erin Lesh erialesh@ncdot.gov

Patrick Whiteford pwhiteford@azdot.gov

**Product Team Update
RHUG meeting 11/10/21**

Nathan Easley

Capabilities currently under development

- **Stationing event type support**
- **Two scripts to assist with migration to Pro**
 - **Add Calibration Points to loop portions of routes**
 - **Update Intersection Referents on Events**

Support Incidents/Defects

- **BUG-000143396** – Deleting a version in Roads & Highways 10.8.1 does not release route locks (developer fixing)
- **BUG-000143813** – Selecting events by route in Event Editor doesn't return point events at the start and end of the route (fixed for next release)
- **BUG-000144357** – Running Append Events for non-alpha routes fails with Error 999999 (developer investigating)

Other Announcements

- **ArcGIS Pro 2.9 and Enterprise 10.9.1 publicly available later this month**
- **Interest in a Hands-On Learning Lab for Roads and Highways in Pro at GIS-T?**

esri

**THE
SCIENCE
OF
WHERE**

Visualizing Roads & Highway's Errors

Creation of an Executive Dashboard

ADOT

Shaun Perfect - ADOT

John Ehlen - Gistic Research, Inc.

Shaun Perfect

Senior GIS Analyst
ADOT

John Ehlen

GIS Project Manager
Gistic Research, Inc

Agenda

- Introductions
- Background & Need
- Dimensions and Metrics
- Architecture
- Challenges

Challenges with large-scale data maintenance

Many of us can relate to data bugs and errors getting introduced in day-to-day editing activities especially using large datasets that consist of many different data layers.

Why So Many Errors?

- 105 editable registered features
- Many Editors
- Multiple projects that all involve manual editing
- Automated processes
- ADOT's 2014 Roads & Highways migration
- New errors can be introduced in fixing existing errors

Not Quite Yet To Pro

- ADOT MPD upgraded to 10.7 not too long ago
- Have yet to implement Data Reviewer
- Have yet to implement Insights
- Still need to upgrade Workflow Manager and initiate better, more concise workflows to assist in our daily processes
- Waiting for full confidence in how Roads & Highways works with Pro

The Need For More

- ❑ GIS and Project managers want to have quick feedback to see who and what type of errors are being made.
- ❑ Esri currently does not have dashboards that provide managerial tools to view errors

ADOT Data Quality Control Process in RnH

Before Dashboard Development

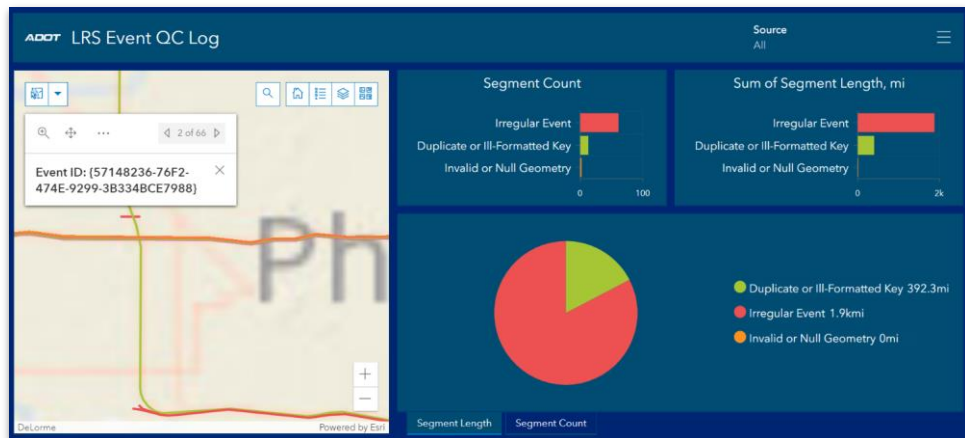

- Manual data quality control process only done when needed or when specific errors found
- Data bugs proceed in data easily
- No automated processes
- No standard QC rules in place

EventId *	From	Start	To	End	FunctionalClass	FromReferentLocation

ADOT Data Quality Control Process in RnH

After Dashboard Development (Tableau)

- Managers can review data bugs real time
- Automated processes to find and catch data bugs
- Prioritize data issues to tackle high order items
- Transitioned from Tableau to Google Data Studio

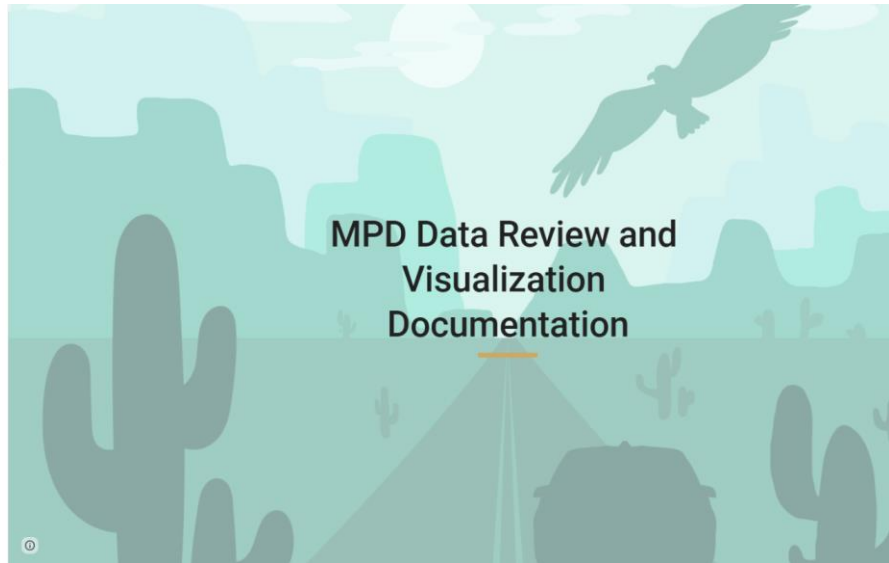

ADOT QC Rules Defined & Documented

As MPD GIS made its transition from using the Tableau dashboard to the Google Data Studio, we documented all QC rules and implementations as they were put together using Google Sites.

Dashboard Dimensions

- Who
 - Editors / Editing Agency
- When
 - Rolling 60 days
- Layers
 - All relevant features in SDE
- Error Type (Displayed on separate tabs)
 - Domain Violations, LRS Event Errors, LRS Route Errors
- Error Description
 - General description of the error to assist in resolution
- Error Location
 - Along which route, and at what measure, and for which event is the issue located?
- Error Specification
 - Object ID(s) of specific record showing error is given

QC Categories

- ❑ ArcSDE Domain Violations
 - All domain controlled layers/fields minus pre-determined exclusion list

- ❑ LRS Event Errors
 - Gaps, Overlaps, Out-Of-Bound events

- ❑ LRS Route Network Errors
 - Undershoots, Overshoots, Spikes, Overlaps, etc

- ★ Triggered Updates
 - Error resulting from route edit propagating to event

QC Category - Events

Coverage Rule	An event feature class should cover entire network
---------------	--

Extent Rule	No event should exist beyond the route extent
-------------	---

Overlap Rule	Within an event feature class, there should not be overlap
--------------	--

QC Category - Routes

- ❑ Geometry Errors
 - Invalid, empty, degenerate, etc.

- ❑ Route Measure Inconsistencies
 - Monotonicity - one spatial location corresponds to one unique measure, and each unique measure corresponds to one spatial location.

- ❑ Route Vertex Inconsistencies
 - Geometry contains short segments, points, minor gaps, undershoots, overshoots, or a switchbacks.

QC Category - Route Geometry

SHAPE	ROUTE_ID	F_MEAS	T_MEAS	
Polyline	I 010	1	99.2998	99.3998
<Null>	I 010	1	99.3999	109.3741

Null Geometry

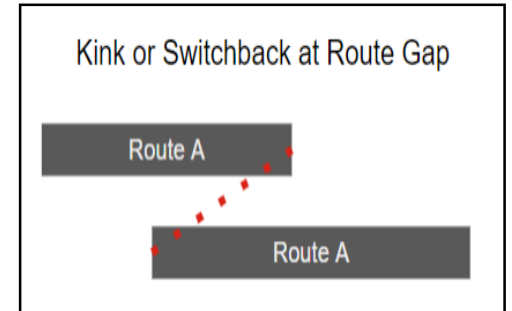

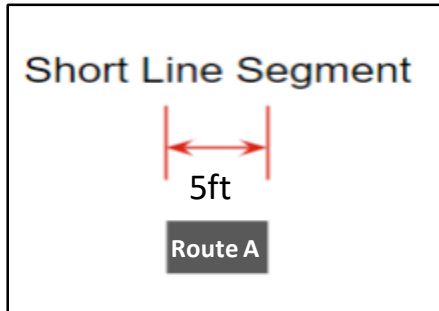

QC Category - Route Measure

Non-Monotonic Measures on Two
or More Vertices on a Route

Decreasing vertex measure, but increasing route measure

QC Category - Route Vertex

Dashboards Options:

Tableau vs AGOL VS Google Data Studio

Tableau:

Pros:

- Can do OTF calculations
- Can create calculated fields
- Much easier to work with tabular data
- Easier to accommodate landing page, disclaimer

Cons:

- Can be cumbersome to develop and maintain
- **ADOT Internal network required for viewing**

AGOL:

Pros:

- Great w/ spatial data viewing and analysis
- Can be viewed outside ADOT network

Cons:

- **Poor Tabular Visualization**
- No OTF calculations
- No calculated fields
- Hard to fully replicate tableau

Google Data Studio:

Pros:

- Can replicate most Tableau functions
- Can be viewed outside ADOT Network

Cons:

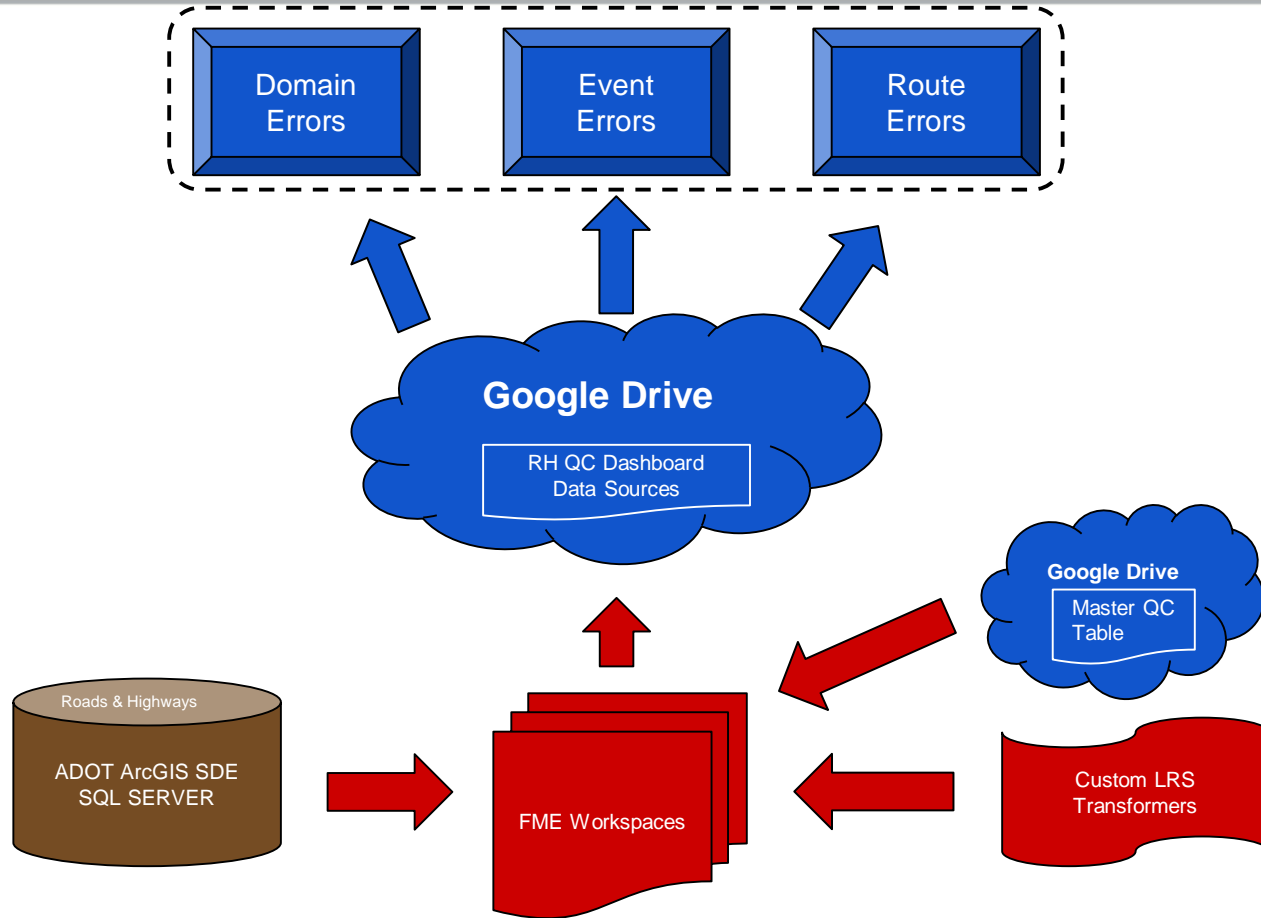

- Manual workflow to update data
- Can't publicly be viewed without ADOT log in
- **Cell count limitations for google sheets**

AGOL VS Google Data Studio

Can it pivot? Can it Group?

Data Flow

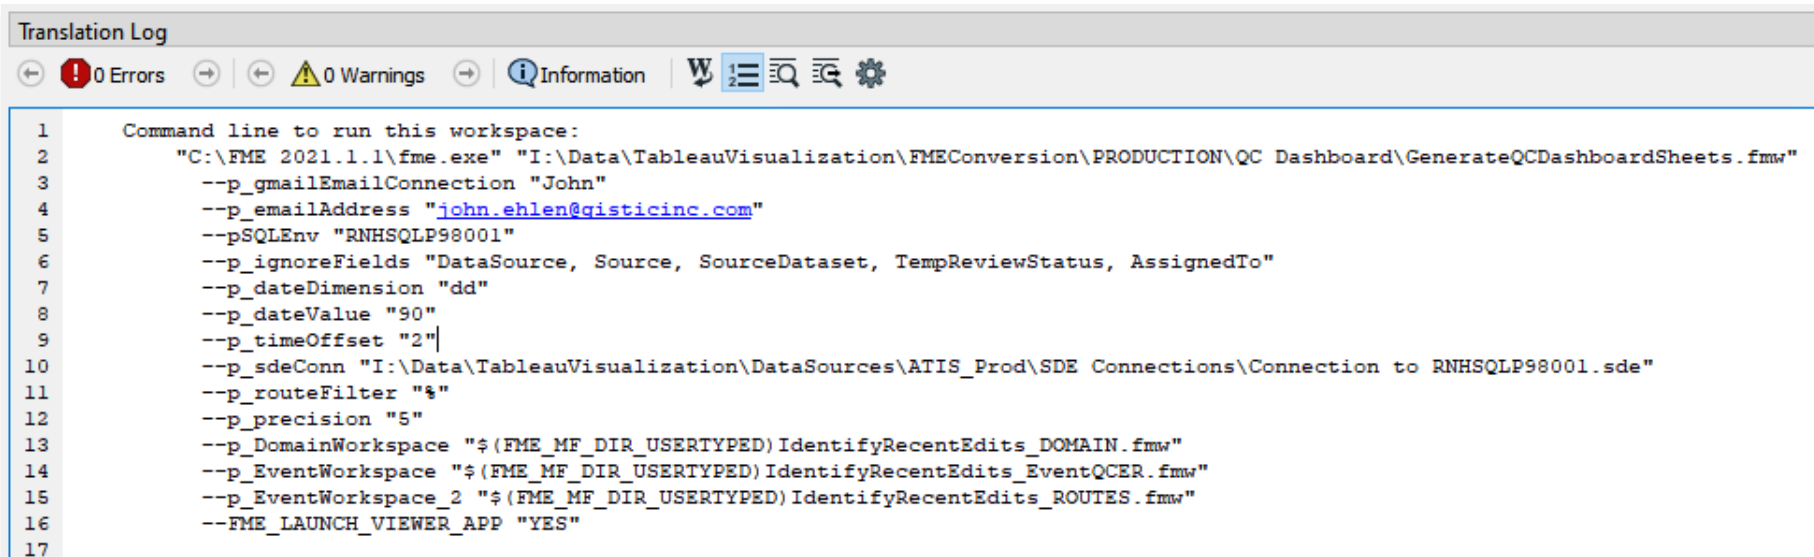

Automation...w/o FME Server?

- ❑ Challenges
 - No FME Server
 - No local admin access to PCs

- ❑ Process
 - Batch Scripts
 - Working with IT
 - MS Task Scheduler

Automation Continued

The screenshot shows a 'Translation Log' window with a toolbar at the top containing icons for back, forward, 0 Errors, 0 Warnings, Information, and various view settings. The main content area displays a command line for running a workspace, with line numbers 1 through 17 on the left margin.

```
1 Command line to run this workspace:
2 "C:\FME 2021.1.1\fme.exe" "I:\Data\TableauVisualization\FMEConversion\PRODUCTION\QC Dashboard\GenerateQCDashboardSheets.fmw"
3 --p_gmailEmailConnection "John"
4 --p_emailAddress "john.ehlen@gisticinc.com"
5 --p_SQLEnv "RNHSQLP98001"
6 --p_ignoreFields "DataSource, Source, SourceDataset, TempReviewStatus, AssignedTo"
7 --p_dateDimension "dd"
8 --p_dateValue "90"
9 --p_timeOffset "2"|
10 --p_sdeConn "I:\Data\TableauVisualization\DataSources\ATIS_Prod\SDE Connections\Connection to RNHSQLP98001.sde"
11 --p_routeFilter "%*"
12 --p_precision "5"
13 --p_DomainWorkspace "%(FME_MF_DIR_USERTYPED)IdentifyRecentEdits_DOMAIN.fmw"
14 --p_EventWorkspace "%(FME_MF_DIR_USERTYPED)IdentifyRecentEdits_EventQCER.fmw"
15 --p_EventWorkspace_2 "%(FME_MF_DIR_USERTYPED)IdentifyRecentEdits_ROUTES.fmw"
16 --FME_LAUNCH_VIEWER_APP "YES"
17
```

Automation Continued

```
1 @set log="I:/Data/TableauVisualization/FMEConversion/PRODUCTION/QC Dashboard/RecentRun.log"
2 @rem assign start time to t0, calculation won't work right if the program run spans local
  midnight.
3 @set t0=%time: =0%
4
5 @echo STARTING QC DASHBOARD UPDATE %TIME% - %DATE% >%log%
6 @echo LOCATED AT %~f0>>%log%
7 @echo *****>>%log%
8 @echo *****>>%log%
9
10 call "C:\FME 2021.1.1\fme.exe" "I:\Data\TableauVisualization\FMEConversion\PRODUCTION\QC
  Dashboard\GenerateQCDashboardSheets.fmw" --p_gmailEmailConnection "John" --p_emailAddress
  "john.ehlen@gsticinc.com" --p_SQLEnv "RNHSQLP98001" --p_ignoreFields "DataSource, Source,
  SourceDataset, TempReviewStatus, AssignedTo" --p_dateDimension "dd" --p_dateValue "90"
  --p_timeOffset "2" --p_sdeConn "I:\Data\TableauVisualization\DataSources\ATIS_Prod\SDE

Future Evolution...?

Questions For Esri/Community

1. Enhancements to tabular visualizations in AGOL dashboard?
 - a. LRS-Centric AGOL reporting?
2. Additional Functionality in ArcGIS Insights?
 - a. on-the-fly DynSeg
 - b. Linear Mileage summarization by district/boundary
3. What are other agencies doing to visualize data for non-spatial customers?
4. What types of route edits trigger cascading event edits?
 - a. Geometry and/or attributes?
 - b. Time delay for route edits to propagate to events?

from Shaun Perfect to everyone: 12:47 PM

Quick question about the intersection referents - will the intersection tool still find and give the measurements for all intersecting routes or will it only give one intersecting route measure per intersection after this change is implemented?

from Ryan Koschatzky to everyone: 12:48 PM

What database are you using?

Oracle 8

SQL Server 26

PostGres 1

from Ryan Koschatzky to everyone: 12:48 PM

Has anyone prepopulated existing events with referent offset information?

Yes 9

No 14

from Ryan Koschatzky to everyone: 12:49 PM

Future Pro presentation?

Yes 1

No 10

Maybe 6

from Amit Hazra to everyone: 12:49 PM

The endpoint for server changes from LRSServer to LRServer. (Find and Replace)

from Elsit Mandal to everyone: 12:49 PM

Is the RouteConcurrency Tool be in ArcPro in the next release or later?

from Nicole Hanson to everyone: 12:50 PM

YES PLEASE - Hands on learning!

from Ryan Koschatzky to everyone: 12:50 PM

Yes, to Pro lab at GIS-T

from Lesh, Erin A to everyone: 12:50 PM

yes!

from Sam Coldiron to everyone: 12:50 PM

Yes for lab!

from Ryan Blum to everyone: 12:50 PM

Yes for Lab

from Shaun Perfect to everyone: 12:51 PM

Yes, to Pro lab at GIS-T

from Amit Hazra to everyone: 12:53 PM

@Yelena - noted. We will consider different learning tracks for the HOLL.

from Shaun Perfect to everyone: 12:55 PM

For our business needs (i.e. safety) it is very important that we have all measures for intersections for all routes so I'm glad to hear that you are working on that. Thanks Nathan!

from Tom Brenneman to everyone: 12:56 PM

Does the geometry to measure web service call allow you to just return the closest route vs. all routes within the tolerance?

from Kevin Hunt to all panelists: 12:56 PM

Erin, Ryan, Patrick, I would like to begin sharing our experiences with the AgileAssets integration via GeoNet. Let me know if you have thoughts on where and how I could do that most effectively.

from brian beiber to everyone: 12:57 PM

yeah!!

from Tom Brenneman to everyone: 12:57 PM

Woohoo!

from Yueming Wu to everyone: 12:57 PM

nice!

from Amit Hazra to everyone: 12:58 PM

@TB great question. Good to hear from you.

from Ryan Koschatzky to everyone: 1:01 PM

I will look Kevin. I am not sure we can have different areas like before. Maybe we can add a label (aka tag) for searching later.

from Amit Hazra to everyone: 1:07 PM

ArcGIS provides a user interface for Data Reviewer. You can also configure attribute rules and validations and use the ArcGIS Error Inspector to visualize errors.

from Amit Hazra to everyone: 1:18 PM

Re: ArcGIS doesn't constrain users. Please review Geodatabase Attribute Rules - Constraints:

<https://pro.arcgis.com/en/pro-app/latest/help/data/geodatabases/overview/constraint-attribute-rules.htm>

from Michael Clement to everyone: 1:23 PM

@Amit/Nathan. This presentation looks like another process that benefits from the editable version views. At Iowa we are hesitant at going to Pro and Branch Versioning since the EVW are going away. Is there any chance these can be added to the Branch Versioning mode?

from brian bieber to everyone: 1:24 PM

agree with Michael Clement

from Amit Hazra to everyone: 1:26 PM

I can't speak to the underlying VMS architecture. I can say that migrating to Pro will likely deprecate many of these creative validation methods since you'll be able to leverage underlying attribute rule logic to constrain, calculate, and validate.

from Ryan Koschatzky to everyone: 1:27 PM

I think ROW might be the only event that might have valid short segments depending on the event is captured.

from Nathan Easley to everyone: 1:29 PM

@ John, Did you investigate Insights at all or did you only look at ArcGIS Online?

from Kevin Munro to everyone: 1:33 PM

INDOT is also batching FME with task scheduler but we were able to get an IT security exception to allow 2 GIS staffers to get these rights.

from Nicole Hanson to everyone: 1:41 PM

Do you send the event errors to those event owners to fix? Do they have access to this dashboard to see what errors they need to fix? Can they run data reviewer themselves?

from Nicole Hanson to everyone: 1:49 PM

ITD uses Roadway Reporter and Data Reviewer to help with looking at data.

from Nicole Hanson to everyone: 1:51 PM

Yelena - I'm sending you a message :)

from Amit Hazra to everyone: 1:53 PM

@Yelena - good question. At 2.9/10.91 all the capabilities of the classic version of R&H has been built out. The future for our product enhancements is Pro-based LRS services. Since you are beginning your implementation and do not need to worry about any legacy R&H process, we would recommend you go directly to ArcGIS Pro/Enterprise.

from John Ehlen to everyone: 1:58 PM

@Amit Hazra: You are correct about Pro doing most of these checks. We hope to utilize the features in Pro once ADOT migrates to Pro.

from Sam Coldiron to everyone: 1:58 PM

Thank you!

from Jean Hannon to everyone: 1:58 PM

thank you
