Capabilities currently under development

- **Multi-field (concatenated) Route ID support in ArcGIS Pro**
  - **Edit activities UI**
  - **GP tools**
- **Completed 10.7 pre-release (available mid-late January)**

Support Incidents/Defects

- BUG-000115036 - Line events created on a redline in Event Editor get "Route measures are null" after creating the route and applying updates in ArcMap (fixed for 10.7 pre-release)

- BUG-000116664 - In Roadway Characteristics Editor 10.6.1, selecting events by the route highlights the route, resulting in indistinguishable linear event features (fixed for 10.7 pre-release)

- BUG-000117296 - Conflicts are introduced on routes when doing calibration point edits while the route edits are being posted in another version (working with geodatabase team to fix)

- BUG-000117802 - In Event Editor, grouped unique value symbology duplicates in layer list (developer investigating)

- BUG-000118489 - Incorrect measure values are assigned on events when a whole part of a gapped route is reassigned and the event behavior is set to Snap in ArcGIS Desktop (fixed for 10.7 pre-release)

- BUG-000118639 - Incorrect measure values are assigned to events when a whole part of a gapped route is realigned with the Split Value 'To Measure' set to the end of the gap and the event behavior is set to Cover in ArcGIS Desktop 10.6.1 (developer fixing for 10.7)

- BUG-000118270 - Extreme latency in snapping until a feature cache is created (working with geodatabase team to fix)
